BSCS – 6TH

FALL 2024

QUIZ 4

Question 1 :

(5 marks) **CLO4**

Write a React Native code snippet to create a new item in Firebase Realtime Database or Firestore. Use `useState` to handle input data and `fetch`/`AXIOS` to send a POST request to the Firebase URL: `https://<your-database-url>.firebaseio.com/items.json`. Ensure your code includes:

- Two input fields (`title` and `description`).
- A button that triggers the POST request when pressed.

Question 2 :

(2 marks) **CLO4**

Explain how `useState` and `useEffect` work together to manage state and side effects in a React Native app. How are they particularly useful when dealing with Firebase integration for tasks like data fetching or updating?

Question 3 :

(3 marks) **CLO2**

Explain the concept of `useEffect` dependency arrays in React Native. How can this feature be used to automatically refresh data in a Firebase-connected app when specific state variables change? Provide an example.

Solution 1

Solution 2
